

KOVAX MACHINES

THE COMPLETE SANDING SOLUTION

PROMA-X ELECTRIC 150

ELECTRIC RANDOM ORBITAL
SANDER - 150 MM

The ProMa-X Electric 150 is equipped with a highly flexible power cord which reduces the risk of kinks or cord rupture. It also has 7 different speeds. With a reach between 4,000 and 10,000 RPM. Two protective systems are installed to protect the machine from overheating and downforce overload. The ProMa-X Electric 150 comes with six free hose-cable clips. They easily connect the cable to the dust extractor hose, which minimizes the risk of tripping of loose cables.

PROMA-X AIR 150

PNEUMATIC RANDOM
ORBITAL SANDER - 150 MM

The strength of the ProMa-X Air 150 is its ergonomic design and light weight. Due to the ergonomic grip, vibrations are easily absorbed. Hand fatigue will be reduced considerably and there will be a better feeling with the machine. At the same time its light weight (< 1 kg.) causes the ProMa-X Air 150 to be extremely mobile and particularly suitable for curved areas. This versatile and user-friendly sander has a rotation speed of up to 12,000 RPM and comes standard with the corresponding back-up pad (885-0159).

PROMA-X POLISHER 150

ELECTRIC POLISHER - 150 MM

The ProMa-X Polisher 150 has a powerful 1100 W engine to get the best result quickly. Due to its safe start, the polish compound will not spread around, allowing you to work in a clean working environment. You can set the machine on 6 different speeds, with a reach between 750 and 1,850 RPM. Large surfaces can be polished in less time by using a 190 mm pad. The ergonomic handle can be used by right- and left-handed persons because it can be attached on both sides. With the innovative drive shaft lock you can easily lock the rotating part, enabling you to safely change machine pads.

PROMA-X DUST EXTRACTOR

INDUSTRIAL ELECTRO-PNEUMATIC
DUST EXTRACTOR - L & M-CLASS

The vacuum is suitable for both electric and pneumatic tools. It is user-friendly and a true cost-saver because only one vacuum is needed. The vacuum starts when the electric or pneumatic sander is turned on and stops when the sander is turned off. It results in less noise, a longer vacuum lifetime and electricity savings. Every 15 seconds the filter cleans itself automatically, providing a constant suction performance and less maintenance. It is also possible to safely absorb liquids. The M-class is equipped with a safety indicator. As soon as the air velocity drops below 20m/sec, the vacuum gives a signal to warn for the risk of too much dust.
