309LMo Tig

CATEGORY TYPE Stainless steel Tig welding wire for dissimilar welding and cladding. **APPLICATIONS** A continuous, solid, corrosion-resistant wire of the "309LMo" type. CEWELD 309LMo is used for the overlay welding of unalloyed and low-alloyed steels and for welding dissimilar steels, such as 316L, to unalloyed and low-alloyed steels when Mo is essential. **PROPERTIES** Excelent corrosion resistance against oxidising air upto 950° C. Good resistance against hot cracking due to the high Mo. content. **AWS CLASSIFICATION** A 5.9: ER 309 LMo F-No. 6 **EN ISO** 14343-A: W 23 12 2 L FM5

DIN: W.Nr. 1.4459

GMAW-GTAW Solid wires

SUITABLE FOR Buffer layers before hard facing, dissimilar joints between ferritic and austenitic steels and or other

stainless steel types to standard carbon steel. Recommended for cladding on low alloyed steel in case AISI

316 is required as first layer.

APPROVALS CE approved
